

HLM Final Project Proposal Guidelines

If you wish to conduct an individualized final project, you should prepare a brief 1-2 page proposal as described below. This is ungraded, but will ensure that you have a suitable plan for the project and will give the instructor the opportunity to offer feedback or suggestions.

Due May 10 at 10 p.m. on Canvas

Your proposal should include:

1. Your primary research question, stated as clearly and concisely as possible.
2. A brief primer of your data. Describe your population and sample, key covariates.
3. Describe the nesting structure for the key models you wish to run (e.g. students within schools, or time points nested within workers nested within firms).
4. Your general plan for analysis. What kind of variable is your outcome and what kind of HLM will you run? What treatment or control variables will you introduce? This does not need to include specific models, just your planned approach to answering your question.
